Thursday, June 7, 2018, 2 - 3:30 pm

Lab Tour and Career Talk
with Dr. Madeleine Kittner, HU Berlin

Means and meaning of application in computer science

Dr. Madeleine Kittner is a postdoc in the group of Professor Leser at the department of computer science. Currently, she is developing tools to automatically extract information like diseases or treatments from German physician letters. She is working in close collaboration with medical partners in two hospitals. This is also her main motivation – the application of her work! During the tour, Madeleine gives a presentation on her current research at the department of computer science and provides insights into her laboratory routine.

Madeleine’s scientific background is divers: She has received a PhD in Biochemistry from Universität Potsdam for modeling protein structures in 2011. Since then she has been working in academic research institutes and in a start-up on projects concerning impact of mutations on diseases or information hidden in medical text. Having two kids, she may also share her ideas during this tour on navigating work and family.

The tour is aimed at doctoral students, postdocs and masters students.

Venue: Institut fuer Informatik, Rudower Chaussee 25, 12489 Berlin
Haus 4, Raum 4.410

Please register by May 31, 2018: petra.metz@hu-berlin.de
