Lessons learned in academia

Prof. Caren Tischendorf/ Prof. Maite Wilke Berenguer

Understanding selection committees for professorships

With talks by successful people from science, industry and the public sector, WiNS Adlershof aims to present role models and contacts for questions regarding career paths within and outside of academia, family options and much more.

If you want to pursue a career in science and become a professor, you need to be familiar with the procedures of the selection committees. What are the do's and don't's? What are unwritten rules of the selection process? How can you prepare to this challenging task? What questions might you expect to have?

Prof. Tischendorf und Prof. Wilke Berenguer will share their knowledge about selection committees to help you to strategically plan your next steps on the way to a professorship. Both are mathematicians, but have participated on many juries in other disciplines of science. If you want to stay in science, their first-hand knowledge and advice can therefore be very useful for all PhD students or postdocs in our faculty.

Caren Tischendorf, Professor for Applied Mathematics at HU Berlin, is currently vice-dean for research at the Faculty of Mathematics and Natural Sciences, Head of [Commission for Promotion of Women](#), [MATH+](#) Board Member, [TRR154](#) Deputy Speaker

Maite Wilke Berenguer has held an assistant professorship for Interdisciplinary Mathematics at HU Berlin since March 2021 after completing her PhD at TU Berlin and an assistant professorship at Ruhr-Universität Bochum.
