Thursday, 29 April 2021, 3-4pm

Lessons learned in academia.
Virtual networking meeting with Dr Franziska Emmerling,
Head of Division, Bundesanstalt für Materialforschung und -prüfung (BAM)

With this new series, we invite various personalities from our campus to talk about their personal career path and to discuss their ‘success stories’ or topics related to career development with female PhD students and postdocs.

We are honoured that for the kick-off, Franziska Emmerling has accepted to share her experiences in academia with us and to present her 5 main learnings. Dedicated to a strict ‘giver attitude’, she strongly believes that we rise by lifting others. Passing this concept to her students, she prepares them for success in academia or industry. We look forward to this talk!

Priv.-Doz. Dr. rer. nat. habil. Franziska Emmerling has been head of division ‘Structure Analysis’ at BAM, since 2012, working in different research areas from nanoparticles to metal-organic frameworks. She is co-author of more than 200 peer-reviewed articles. From 2010 to 2013, she was a visiting professor at Humboldt-Universität zu Berlin.

Please register by 20 April: petra.metz@hu-berlin.de
