WiNS Adlershof is the central platform for female scientists at Adlershof under the umbrella of FiNCA. WiNS Adlershof actively pursues the goal of gender equality and helps female scientists in their individual career planning, especially for a later leadership position in science. It is part of the Caroline von Humboldt Programm (CvH), which contains all measures of the gender equality strategy of Humboldt University.

Our offer
To be successful in the natural sciences in the long run, besides academic excellence, key competences as good lecturing and scientific writing are required. WiNS Adlershof offers an interdisciplinary, modular qualification program that includes soft-skills-seminars, coaching and a mentoring program. In addition, regular network events are offering insights in the work of non-university research institutes in Adlershof.

The seminars and events take place in German and optionally in English to achieve the greatest possible training effect with everyday use.

They address doctoral candidates as well as postdoctoral fellows at the Adlershof campus.

Program start:
October 2017
