

Transdisciplinarity and artistic expression for enhancing scientific practice and communication

WORKSHOP SERIES

Interactive sessions on art-based, participatory, and power-sensitive research methodologies, helping researchers integrate arts in science. Participants will explore artistic methods, including visual and performing arts, sound, and cartography by means of hands-on exercises and case studies, for applying them to their own research ideas in an interdisciplinary environment.

The workshop is designed for students, doctoral researchers and postgraduates engaged in sustainability-related fields such as natural sciences, geography, social sciences, agriculture and economics, and those wishing to work in transdisciplinary projects.
