Remote Workshop

Beatriz Beyer

Spontaneity and quick wit for scientists

As scientists, we know how to work in a structured and methodological manner, and we are used to being evaluated constantly. In this online workshop, we invite you to set that all aside. Instead of evaluations, there will be a celebration of errors; instead of a rigid framework, there will be a creative chaos. With basic exercises of improvisational theater, we provide you with an active, playful, and inspiring change to your everyday life as a scientist. Additionally, we train to be bold and spontaneous in uncertain situations and to react quick-witted to unexpected questions and comments. This might be useful not only for your daily life but could come in handy at conferences and your workplace.

About the trainer:
Beatriz Beyer is an actress of improvisation theater, who is also training others in the art of improv. She teaches improv workshops at the University of Göttingen, the Theater für Niedersachsen (TfN), and for organizations and businesses. As a former scientist in the field of simulations for renewable energies, she experienced the ups and downs of the academic and scientific world. Now she is doing her own applied research on potential synergies between improv and science.
