Free live webinar on the International Day of Women and Girls in Science featuring

María Piquer-Rodríguez, Geo.X Postdoctoral Researcher (Young Academy) at FU/ HU Berlin
A career path as a woman in land-use and sustainability sciences

What exactly does a postdoc do at a research institute or university? What scientific questions does he or she want to address? What is their daily work routine? At our regular Lab Tours, female postdocs of the various institutes on the Adlershof Campus introduce us to their workplace and talk about their personal career path – how they got to where they are now and how they imagine their professional future.

This time, María Piquer-Rodríguez, a scientist from the Earth Observation Lab of the Geography Department of HU and the Latinamerica Institute of the Freie Universität Berlin, will give an overview of her research topics at the intersection of different institutions and disciplines and tell us about her career path as a woman in ecology and land-use sciences.

María Piquer-Rodríguez started at FU and HU as a postdoctoral researcher in 2019 after a two year postdoc in northern Argentina at the Institute of Regional Ecology of the National University of Tucumán. She gained her PhD from the Geography Department of the HU in 2017. Her research area is land-use systems and sustainability.

The lab tour is aimed at female PhD students, postdocs and master's students and will be held in English.

Please register by e-mail: petra.metz@hu-berlin.de

Zoom link shared after registration.

This event will be recorded and we will make it available at our website for those who cannot attend it.
