Wednesday, 26 May 2021, 3-4 pm

Lessons learned about entrepreneurship.
Virtual networking meeting with Dominik Sarma, Co-Founder Belyntic

If you want to know more about how to launch an idea and turn your research into a business idea, then join us for our next virtual career talk. In 2016, Dominik Sarma founded a start-up with three colleagues/PhD students, which turned out to be very successful. We are honoured that Dominik has agreed to share his experiences with us and to present his main learnings.

Dr. Dominik Sarma earned his PhD in chemistry at HU Berlin/Bundesanstalt für Materialforschung und -prüfung and co-founded Belyntic in 2018, a chemistry-for-healthcare start-up company located in Berlin-Adlershof, focusing on the purification of biopolymers, particularly peptides. They combine expertise in peptide and organic chemistry, modern laboratory infrastructure, and a strong scientific and industrial network.
